DETAILED ACTION

Allowable Subject Matter

1. Claims 1-2, 4-7 and 9-14 are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The closest prior art fails to disclose or fairly suggest:

- A method of distributing clock including the step of providing a return line geometrically matched to the transmission line, as called for in claim 1;
- A method of distributing clock including the step of obtaining the returned clock signal by sensing a reflection of the output clock signal on the transmission line, as called for in claim 2;
- A method of distributing clock further including the step of comprising buffering the output of the voltage controlled oscillator and providing a build out impedance to match the transmission-line impedance, as called for in claim 7;
- The clock distribution circuit further including circuitry to detect the returned clock signal as a reflected clock signal on the transmission line, as called for in claim 9;
- The clock distribution circuit further including a signal return line separate from the transmission line, in which the returned clock signal is sensed from the signal return line, as called for in claim 10;
- A clock distribution circuit including second circuitry that propagates the first output clock signal onto a second transmission line based on the average the output of the third phase

detector and the fourth phase detector, in combination with the remaining claimed limitations, as called for in independent claim 12;

- A method of distributing a reference clock signal, the method including the steps of a) Sensing a reflected clock signal at the beginning of the transmission line, and b) adjusting the output clock signal based on an average of a first phase difference between the output clock signal and the reference clock signal and a second phase difference between the reflected clock signal and the reference clock signal, as called for in independent claim 13; and

- A method of distributing a reference clock signal, the method including the steps of a) sensing a returned clock signal at the end of a signal return line matched to the transmission line, and b) adjusting the output clock signal based on an average of a first phase difference between the output clock signal and the reference clock signal and a second phase difference between the returned clock signal and the reference clock signal, as called for in independent claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
